

## Scaffold

main.dart

```
void main() {  
  runApp(MaterialApp(  
    home:Scaffold(  
      appBar:AppBar(  
        title:Text("First Flutter App"),  
      ),  
      body:Center(  
        child:Text(  
          'This is a first App',  
          style:TextStyle(  
            fontSize:40.0,  
            fontStyle:FontStyle.italic,  
            fontWeight:FontWeight.bold,  
          ),  
        ),  
      ),  
    ),  
  ),  
);  
}
```

Combining Scaffold and Safe Area

main.dart

```
import 'package:flutter/material.dart';
```

```
void main() {
```

```
  runApp(MaterialApp(
```

```
    home:Scaffold(
```

```
      appBar:AppBar(
```

```
        title:Text('Scaffold-SafeArea'),
```

```
      ),
```

```
      body:Container(
```

```
        child:SafeArea(
```

```
          child:Center(
```

```
            child:Text(
```

```
              'This is a Sample Text'
```

```
            ),
```

```
          ),
```

```
        ),
```

```
      ),
```

```
    ));
```

```
  }
```
